

Water Conservation Tips

With the drier weather B.C. has been experiencing, it is recommended to conserve water as current forecasts suggest much of the province will experience drought conditions through the summer months.

Water conservation tips:

- take shorter showers
- only do full loads of dishes and try using an 'eco' or 'quick wash' setting
- re-use dishes, such as water glasses, throughout the day so there are fewer dishes to wash
- select the shortest laundry cycle setting for items that are only lightly soiled
- do not leave taps running
